

CORONAVIRUS COVID-19 INFORMATION AND GUIDELINES

THE EXIT STRATEGY

WHAT DOES THE STRATEGY CONSIST OF?

Objective: To gradually phase out the restrictions imposed to curb the spread of the coronavirus while remaining cautious.

Ensure, at all times, sufficient **hospital capacities**.

Foresee the possibility of reintroducing **stricter measures** in the event of a strong resurgence of the virus among the population.

Provide close monitoring of the evolution of the pandemic during the entire exit, as well as the secondary effects of the confinement.

Foster testing capacities and support research in particular with regard to tests to measure the acquired immunity of the population.

Apply basic barrier gestures and reinforce them with other specific measures, including in the workplace, to minimize the risk of an uncontrolled spread of the virus.

Protect, in particular, **vulnerable** groups.
